

Fast guide

Model: NG-C4200 series

Version 1.0

Spanish

Due to regular updates of systems and products, NGTECO cannot guarantee exact consistency between the actual product and the information written in this manual.

Important notes

1. Please read this manual carefully or contact customer service for any questions.
2. This device only works with 2.4GHz Wi-Fi networks. If you have a dual-band router with both 2.4GHz and 5GHz networks, make sure your phone is connected to the 2.4GHz one.
3. Make sure the entered Wi-Fi password is correct when adding a new device.
4. For a stable network connection, please make sure the device is placed near the router.
5. Do not install the camera before confirming successful network connection and smooth live video.
6. Please make sure the power adapter and ethernet port are waterproof to avoid water leakage after mounting the camera outdoors.
7. Due to regular updates of the application and products, we cannot guarantee exact consistency between the actual product and the information written in this manual.

Setting

Connecting the Device with the NGTeco Home App

Step 1: Download the App and Register your Account

Find the appNGTeco Home on the Apple App Store or Google Play Store and download the app to your mobile phone.

open the appNGTeco Home and sign in with your account. If you don't have an account, create an account with your phone number or email.

Step 2: Power on the Device

1. Connect the camera to the wall outlet with the supplied power supply.
2. Wait a few seconds until you hear the audio message "Welcome to use the smart camera."

Note: If you did not hear the message, press and hold the Reset Button for 5 seconds until you hear the message "Reset OK, please wait for reboot".

Step 3: Add the Device to the App

Method 1: Connection by Scan Code

1. Open the app, tap on the "+" button on the upper right corner of the interface, and then select the option "Add Device". Select option "Smart Camera" and then choose the corresponding model purchased.
2. Check "Following" if you have finished the above steps in the interface. Select the desired Wi-Fi and enter the correct password. Then touch the button "Following".
3. Show the QR code towards the lens of the device and the device will scan the QR code. Once you hear the audio message "The camera is configured, Connected to the network", touch the button "Hear the warning tone" on your mobile, the app will connect the device automatically.

Note: Hold the phone about 15-20 cm away from the device. You can slightly move your mobile device back and forth for better scanning.

4. Once you see the message "Added successfully" in the app, you can edit the device name manually. Touch the button "Finalized" to complete the setup.

Note: If you were unable to connect your device to Wi-Fi, please press and hold the Reset Button for 5 seconds until you hear the audio message "Reset successfully, please wait for reboot".

Method 2: LAN cable connection

1. Open the app, tap on the "+" button on the upper right corner of the interface, and then select the option "Add Device". Select option "Smart Camera" and then choose the corresponding model purchased.
2. Change the connection mode at the top right to mode "Cable". I dialed "Following" if you have finished the above steps in the interface. Select the desired Wi-Fi and enter the correct password. Then tap on the "Next" button.

Note: Make sure to connect the camera to your home router using the Ethernet cable.

3. The app will search the camera automatically and then click the button "+" to add the corresponding camera.
4. Once you see the message "Added successfully" in the app, you can edit the device name manually. Touch the button "Finalized" to complete the setup.

Note: If you were unable to connect your device to Wi-Fi, please press and hold the Reset Button for 5 seconds until you hear the audio message "Reset successfully, please wait for reboot".

Review Recordings from Browser

1. Please visit <https://ipc-us.ismartlife.me> and then select the corresponding data server in the upper right corner of the interface.
2. Use NGTeco Home app to scan the QR code to login your account.
3. Click on the corresponding device to view the live videos.

* Device connection with Amazon Alexa or Google Assistant

After successfully connecting the device to the NGTeco Home app, tap the button **EDIT** at the top right corner of the device interface. Select the Amazon Alexa or Google Assistant icon, then follow the on-screen instructions to link your NGTeco Home account to Amazon Alexa or Google Assistant.

After setup is complete, you can use supported voice commands including:

- Echo, show me <device name>.
- Hey Google, show me <device name>.

Note:

1. After changing the name of the paired device, refresh the account again to update the name.
2. This voice control function is optional, it is only compatible with NG-C42XXA.

Facility

Installation location

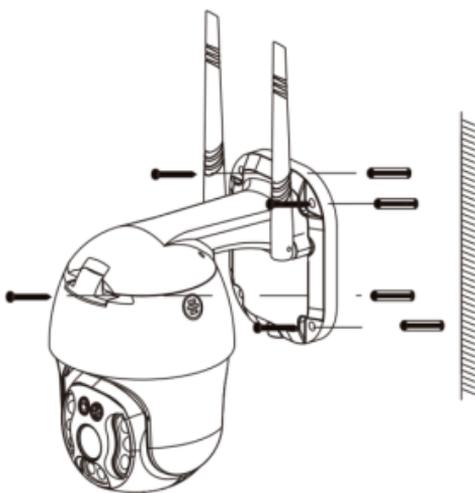

The device can be placed on the ceiling or wall, or it can be placed in a horizontal position. Choose a location with a clear view to have a wide unobstructed field of view and a good wireless signal for your device and you can easily reach a power outlet.

Installation steps

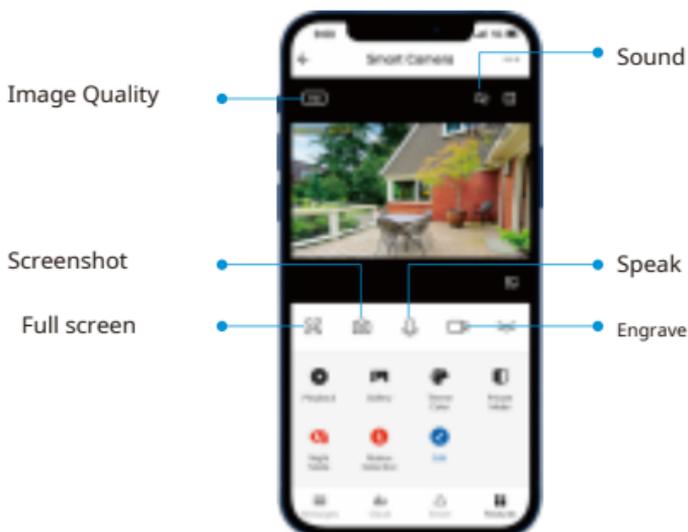

After confirming a successful Wi-Fi connection and smooth live video, you can select the required position to mount the device. The installation steps are as follows:

1. Drill four holes on the wall according to the camera base hole positions, and then insert the plastic anchor into the holes; Anchors are required for walls made of hard materials such as concrete, brick, or stucco.
2. Fix the camera to the wall with four screws.
3. Adjust the viewing angle by reviewing the live video on the mobile app.

Note: Please fix the provided Waterproof Kit on the ethernet interface to avoid possible water seepage.

Warning:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on,

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

IMPORTANT! Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.
